

Switch vidéoprotection v.25

elbaC Cable initialement spécialisé dans la conception et production de câbles courants faibles, vous propose également une vaste gamme d'électronique de transmission. En effet, les performances de ces électroniques sont très dépendantes de la qualité des câbles employés et leur qualification requière un laboratoire très peu différent de celui que nous avons mis en place pour nos câbles.

Dans le cadre d'installation faites avec des câbles et connecteurs elbaC, les fiches techniques de ces électroniques vous informent rationnellement des performances attendues. Cette approche « système » permet de limiter au mieux les aléas liés aux variations électromagnétique inhérentes à chaque chantier.

Au cœur d'un large réseau de distribution nous nous efforçons de capitaliser vos remontées techniques terrain, pour en faire profiter l'ensemble des installateurs. À cette fin, n'hésitez pas à nous contacter et à nous faire part de vos observations.

Nous sommes également à votre disposition pour compléter les spécifications publiques de chaque produit au cas où elles seraient techniquement insuffisantes pour conforter votre choix. Dans la mesure du possible nous pouvons essayer de monter en laboratoire une configuration proche de la vôtre pour en déterminer les performances.

De culture technique, nous veillons à toujours orienter nos clients directs comme indirects vers les produits les plus adaptés à leur besoin

elbaC Cable SAS au capital de 60.000 €
